

ON-SITE ELECTRONICS

Our consultants offer excellent **electronic design and software engineering services**. They're experts in the design of electronic components, products, software or systems for commercial, industrial or medical applications. A holistic system view on embedded applications delivers architectures that maximize the added value of your application.

Call upon the outstanding skills of our electronic, embedded software and firmware engineers.

..... MULTIDISCIPLINARY SKILLS & EXPERTISES

Hardware design

- FPGA firmware design
- Prototyping
- Breadboarding
- Material & digital hardware selection (e.g. sensor ...)
- Testing

Embedded software engineering

- Analyzing, developing & simulation embedded software solutions
- Back-end & front-end applications
- Technical documentation

Industrial automation

Electrical drawing & engineering

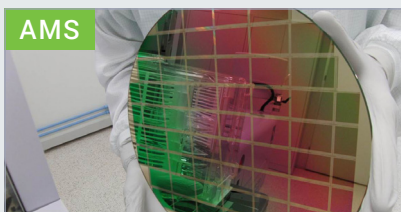

- ECAD & Eplan design

Specialization

- Mechatronica & robotica
- IoT
- Machine Learning & Artificial Intelligence
- Image editing
- Streaming
- Sensor read out

On-site projects

Visit moebius.consulting for more information

Systems software for CMOS image sensors semiconductor testing

Eco-design measurements & calculations

Digital retrofit for electricity meters
